Affinity of Rabbit anti Rabbit Anti-Monkey IgA mAb, HRP conjugated

Dose response curve of HRP conjugated Monkey IgA mAb measured by ELISA. 1 µg/mL of various immunoglobulins were coated to 384-well plate. , blank wells without protein were used as negative control (NC). The coated plate was blocked and subsequently incubated with 25 µL of HRP conjugated Rabbit Anti-Monkey IgA mAb in a 3 fold serial dilution from 1 µg/mL to 6.97 Å10<sup>-2</sup> pg/mL. incubation was performed at room temperature for 1 hour. The ELISA result demonstrated that Rabbit anti-Monkey IgA mAb has highly specific recognition of Monkey IgA while no or minimal cross reactivity to Monkey IgG, IgE, IgG3, Human IgA, Mouse IgA.
